## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 and 22-34, drawn to targeted proteins, classified in class 435, subclass 183.
- II. Claims 19-21, drawn to DNA encoding targeted proteins, classified in class 536, subclass 23.2.
- III. Claims 35-37, drawn to methods of making targeted proteins, classified in class 435, subclass 183.

Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). Also, product and process inventions are distinct if any of the following can be shown: (1) that the process as claimed can be used to make another and materially different product, (2) that the product claimed can be used in a materially different process of using that product, or (3) that the product claimed can be made by another and materially different process (MPEP § 806.05(h)). These inventions are different or distinct for the following reasons.

The nucleic acids of Invention II are related to the proteins of Invention I by virtue of encoding the same. The DNA molecule has utility for the recombinant production of the protein in host cells. Although the DNA molecules and proteins are related since, the DNAs encode the claimed proteins, they are distinct inventions because they are physically and functionally distinct chemical entities, and the protein products can be made by another and materially

Art Unit: 1652

different process, such as by synthetic peptide synthesis or purification from the natural source. Further, the DNAs may be used for processes other than the production of the protein, such as nucleic acid hybridization assay.

The methods of Invention III are related to the proteins of Invention I as process of making and product made. However, the inventions are distinct because the protein can also be made by chemical synthesis.

The methods of Inventions III are related to the DNA of Invention II as a product and process of using. However, the inventions are distinct because the DNA can also be used for hybridization procedures for detection of the encoded polynucleotide sequence.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art due to their recognized divergent subject matter, as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
